Axalta is a world-leading global supplier of specialised coatings. Through our scientific expertise, network of research and development centres and highest quality raw materials, we develop long lasting and effective customised product solutions for any project.

With a united global team, Axalta can provide end-to-end coating project management solutions worldwide. From developing customised product solutions and special applications techniques, to extensive on-site training and technical support, we support our military coatings customers anywhere in the world.

NIRR coatings are designed to reduce detection by sophisticated NIR technologies

Near Infrared Reflective (NIRR) Coatings

Conventional camouflage coatings are used to blend in military equipment with the natural surroundings, in the visible light spectrum.

With the increasing use of infrared detection devices in military operations, military equipment has become vulnerable to detection, particularly during combat operations conducted at night.

The ability to manage both the visible and infrared signature has become critical to maximising soldier survivability and combat strengths.

The CIA range of NIRR Military Coatings from Axalta Coating Systems has been developed in consultation with the Australian Department of Defence, to reduce detection to surveillance and seeker systems, without impairing the visual camouflage characteristics.

Military Products by Axalta

Axalta manufactures an entire system of paint products suitable for military application.

All products have been specifically formulated to provide the most durable, reliable and maintainable finish for military combat assets.

All five CIA Military Coatings colours have been professionally matched to the MIL-STD 595B colour standard, and are available in both NIRR and Non-NIRR formulations.

Complete Global Coating Project Management Solutions

SPECIALISED SOLUTIONS

Backed by more than 150 years of experience, innovation and industrial leadership, Axalta can develop customised product solutions and techniques designed to improve cycle times and coating productivity.

TRAINING AND SUPPORT

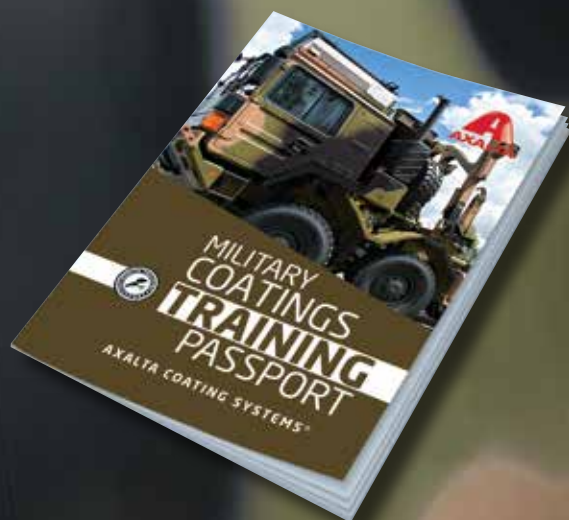

Our dedicated team of technical consultants and trainers work closely with prime contractors and coating applicators to ensure the right product and process selection. This enables a consistent finish to be achieved within specification, regardless of the local environment, equipment and facility.

COMPLIANCE

With a wealth of experience in meeting global regulatory requirements (including REACH and ITAR), Axalta provides customers extensive support in achieving compliance throughout the coatings supply chain.

GLOBAL SUPPLY CHAIN

Axalta can provide an entire global supply chain for specialised projects, everything from production and supply of coatings to logistical handling of paint, warehousing and distribution.

Axalta provides extensive on-site training and technical support

Manufacturing in Australia

All military products are manufactured at our APAS 0502 Certified Manufacturing Unit in North West Sydney. This site has been audited by the CSIRO and also carries ISO14001, ISO 9001 and RC14001 certification.
