SURFACE PREPARATION

Remove dust or oxidation prior to applying primer by media blasting, grinding or sanding. Be certain all surfaces are free of waxes, oils, grease or other contaminant.

Over galvanized steel, an industry best practice is to use an etch primer such as Axalta VS3000 Etch Primer.

APPLICATION

Apply in single wet coats, allowing 5-10 minute flash at 75°F (24°C) between coats. For standard fill: We suggest 2 coats maximum. If 3 coats are applied, allow for overnight drying. 2 mils minimum final film is need to provide good corrosion protection.

NOTE: Do not use over lacquer primer, lacquer finishes or uncured substrates.
