

Bus

Unlike most passenger vehicles, buses spend most of the day on the road, in all weathers. This is why the coatings have to deliver exceptional weather- and corrosion-resistance. In addition, liveries must look good.

Our worldwide network coupled with 145 years of experience give us the capability globally to develop and supply tailor-made offerings that meet local needs. Our solvent-borne and water-based Imron® and Centari® paint systems for buses offer excellent long-term corrosion protection in a wide range of colours.

We know that productivity on the line is also crucial, so we support customers in the bus-manufacturing sector, not only with conventional application expertise, but also with technical help. Our multiple, flexible, logistic solutions, such as our mixing machine concept, contribute to making paint preparation and application as easy as possible.
